NEVORA Owner web guide

This guide covers the current development web workflows. Available modules and provider services depend on the selected environment. It does not certify a hosted release. See the guide index for distribution scope.

Start with your company

Sign in to the company address supplied for your account. Review **Home** for current work, then open **More → Settings** for company configuration. An existing company does not need to be recreated through signup. Production new-company admission defaults closed; provisioning needs its own explicit configuration and authorization. A signup page alone does not establish availability.

Settings includes these current destinations:

Area	What to review
Company	Company profile, locations, branding, features and team terms, company policies
Scheduling	Positions, break types and scheduling rules
Clocker	Clocker tablets, PINs, punch photos and recovery
Pay	Payroll settings, when payroll is available to this environment

Confirm the company timezone, active locations and positions before planning. Location eligibility, operational positions, an access role and a designated shift lead are different settings. Hiding a feature changes its availability; it does not complete the feature's provider setup or required acceptance.

Add people and grant access

1. Open **Team** and add the person. Enter a unique Employee ID and accurate details; choose their role, primary location, eligible locations and positions from the form. An active location is required. An employee record can be saved without an email, but email is needed for an account invitation.
2. Review the person's profile and **Access and sign-in**. Only an Owner can add another Owner or manage account invitations.
3. For a Manager, explicitly select company-wide management or the locations they may manage. Save or revoke **Management access** using the offered confirmation. Promotion or reactivation requires a current access assignment; the role name alone does not grant operational scope.
4. When eligible, use **Send invitation** to the registered email. Review the displayed delivery state. Issued or provider-accepted is not proof of inbox delivery or account activation. A new invitation replaces the previous one.
5. Have the person open their private invitation, choose a password and keep their Employee ID. They then sign in normally. Never ask them to share the password or invitation proof.

Use **Refresh invitation** for current state. If an action is unconfirmed, use **Check action outcome** before sending another invitation. For management access conflicts, reload the current employee and review the current assignment. An earlier receipt records an action; it does not prove access is unchanged now.

Deactivate or change access through the employee's current form. Payroll review and approval grants are separate from management scope. A Lead has personal self-service access; neither the Lead role nor a shift's designated-lead marker grants Manager powers.

Build, review and publish a schedule

1. Open **Schedule**, select the week and location, and check who is eligible. Review **Scheduling rules** for hours targets, staffing, recurring coverage, availability deadlines and shift-change policy. Only an Owner edits the trades-and-coverage policy.
2. Build or fill the draft. Use the available manual shifts, **Copy previous week**, **Week templates** or draft-building controls. Review each assignment, position, designated lead, availability conflict and coverage warning.
3. Open **Publish** or **Publish changes**. Review the listed draft locations, pending changes and blockers. Draft assignments and unpublished edits are not the employee's current published schedule.
4. Publish the reviewed scope. Check the resulting published state. Review acknowledgement status separately; publication and a queued notification do not prove that each person read or accepted the schedule.

Published replacements may require an additional explicit publication consent. Follow the particular review screen. A saved replacement or Rondo coverage draft is not a general instruction to publish every outstanding change.

Review requests and recorded time

Open **Things to do** for current management work. **Time off**, **Shift requests** and **Availability** hold the corresponding records when enabled. Review the exact dates, people, request status and current rules before deciding. Another person's acceptance may still leave a request awaiting management. Refresh a changed review instead of approving from an old screen.

Live **Updates** communications remain under the D04 hold. A visible destination does not activate them; use your existing employer communication channel while that workflow is unavailable.

Use **Time** / **Timecards** to review actual punches, breaks, exceptions and corrections. Scheduling records describe planned work; they do not establish attendance or hours worked. Employees use their location's enrolled **Clocker** to record punches. The personal time view is not a promise of phone clock-in. Review Clocker recovery and any photo requirements through the Owner tools.

For another person’s eligible open punch, use **Close open punch** in the Timecards inspector. Enter the verified company-local end time, a reason and the confirmation, then choose **Record close**. Read the open-break explanation before confirming. A later punch needs a new review. If the result is unconfirmed, use the original close’s recovery control instead of starting a second close.

Use **Request time correction** for another employee’s entry, break or missing time. Check the employee, proposed local times and reason before **Send correction request**. A request leaves original punches unchanged. A different authorized reviewer must decide it; neither the employee nor the person who submitted it can approve or reject it. Follow current-source and finalized-period restrictions.

Review insights and payroll

Insights uses a selected reporting period. Verify that period and the underlying records before drawing conclusions. **Time exports** exports time data; it is distinct from payroll approval or sending money.

When payroll is enabled:

1. Check **Payroll settings**, pay schedule, people and required calculation inputs. The configured workflow may use recorded-time calculation or imported provider amounts; follow the mode actually displayed.
2. Choose **Prepare payroll**, then **Review payroll**. Resolve **Fix before payroll** items and inspect the people, period, payday, amounts and exceptions.
3. Approve only the revision you reviewed. A changed source needs a fresh calculation/review. Approval freezes that revision; it does not mean paid.
4. Use **Share pay statements** separately when offered. Employees see only their own published statements. Review downloads and any delivery state.
5. For a correction, use **Fix this payroll** and review the linked replacement. The original approval and statements remain in history.

Correction payroll does not offer payment-instruction exports. Reconcile any older correction instructions through the existing payment system and accountant; do not calculate a replacement or delta from the file. An already-generated time export must be recovered and reconciled rather than generated again with a new action. A changed export does not automatically replace a provider submission.

Payment instructions, where offered, are a file. NEVORA does not transfer money; the employer's existing payment system handles disbursement. Do not infer bank compatibility, tax filing or universal legal compliance from a calculated amount.

When information is unavailable

Reconnect and refresh. An unavailable list does not mean no work exists, and an unconfirmed save may already have committed. Use the original action's recovery control and inspect current status before repeating it. **Help someone sign in** provides the supported recovery workflow; never collect another person's secret. For Rondo, use the separate Rondo guide. For technical operations or privacy fulfillment, use the operations guide.
