NEVORA Manager and Lead web guide

This guide describes current development web access. Your active role, current Owner-assigned scope, module switches and separate payroll grants determine what you can use. See the guide index for release boundaries.

Check which access you have

Access	Current operational boundary
Manager with company scope	Company operational pages, subject to each workflow's current guards
Manager with location scope	Managed-location Home, schedule and limited team view; bounded draft-shift changes where offered
Manager without a current assignment	Operational access remains unavailable; ask an Owner to assign scope
Lead	Own schedule, availability, requests, time and published pay statements; no Manager review authority

Payroll review and approval are separate grants. A location-scoped Manager does not gain company totals, contacts or financial records by opening a saved link. An Owner controls management assignments. A promotion, reactivation or later scope change can invalidate access that was available earlier.

Company-scoped Manager workflow

Start at **Home** and **Things to do**. Open the current record before acting; old dashboard counts and earlier receipts are not current authorization.

For planning, open **Schedule**, choose the week and location, and review availability and scheduling rules. Create or edit eligible assignments, review drafts and publish through the offered review. **Copy previous week** and **Week templates** are planning aids; inspect their resulting assignments and warnings. Employees follow the published revision, not an unpublished edit. The Owner controls the trades-and-coverage policy.

Use **Time off** and **Shift requests** for decisions currently permitted to your account. Check the people, dates, status and current rules. A coworker's acceptance does not necessarily finish a request; it can still need management approval. Review the resulting status and schedule after a decision.

Team provides employee records within company authority. Current forms may allow permitted employee changes, but you cannot create or edit another Owner as if they were an ordinary team member. Account invitations and Manager scope assignments remain Owner controls. **Help someone sign in** supports authorized assisted recovery; the person keeps their password and private verification material.

Review actual punches and correction requests in **Time** / **Timecards**. Use **Insights** and **Time exports** only for the period you intend. Planned shifts do not establish recorded attendance or final pay. Owner-only company settings and Clocker administration remain with the Owner.

Within current company scope, the Timecards inspector can offer **Close open punch** for another person. Enter a verified company-local end time and reason, read the open-break explanation, confirm and choose **Record close**. Recover an unconfirmed original operation through its recovery control.

Request time correction lets you propose another employee’s entry, break or missing-time correction. Verify the target and proposed times before sending. It leaves original punches unchanged and requires a different authorized reviewer; neither the employee nor requester can approve or reject it. This workflow does not grant company access to a Manager assigned only to locations.

Location-scoped Manager workflow

1. On **Your workspace**, confirm the listed managed locations.
2. Open **Schedule**, choose a managed location and week, and review its shifts. **Add shift** and editable draft forms appear only when the current source and permissions allow them. Use only the offered employee/position choices.
3. Follow a read-only message when a protected or published shift requires company-wide access. Escalate publishing, company rules and protected changes to the Owner or a company-scoped Manager.
4. Open **Team at your locations** to review eligible people. This view omits contact details and employee editing; request those changes through the Owner.

Company-wide totals, request review, reporting, exports and employee management are not granted merely by managing one location. Separate payroll grants may offer additional payroll pages, with their own coverage checks.

Payroll access, when granted

If **Payroll** is offered, follow the current prepare/review/fix workflow within your grant. Review permission does not imply approval permission. Payroll configuration remains Owner-only, and an object outside your financial scope remains unavailable. Approval and sharing statements are separate actions. Payment-instruction files do not move money; the employer uses its payment system. See the Owner guide for the workflow's review boundaries.

Lead workflow

Use the Employee guide for your own activation, shifts, availability, requests, recorded time and pay statements. Lead navigation may use **Hours** or place personal time under **Pay**, while Employee navigation uses **Time**. Your own records remain the scope in either layout.

The access role **Lead**, an operational position and being the designated lead on a shift are separate facts. None grants employee editing, company settings, schedule publication, time-off approval, payroll approval or Rondo access.

If access or a save changes

Reconnect and refresh current information. Stop on access-denied or changed-source messages; ask an Owner to confirm your assignment. Use a workflow's **check outcome** or recovery action after an unconfirmed save rather than creating a second request. A missing or unavailable read is not a confirmed empty result. Use **More → Help** for an app problem and keep private employee/pay data out of support messages.
